**Bilibid Prison Hospital
Manila, P.I.
11-23-42**

16A
report of, Sweeney, Max Mahen, CWT, USN(FR)- Age-43, died 11-22-42 (784)
He was admitted at 1600, 11-21-42 in a moribund condition to
the Yamamoto-Butai Detention Camp, Manila Port Terminal, Manila, P.I.
where he had been working on a labor detail for the Japanese authorities.

The Present Illness began 11-18-42 with onset of chills and
fever, diarrhea without blood, and "blood in the urine" which quickly
debilitated him so that he had to use a bed-side commode. He became
depressed and vomited whatever he would eat. He tried canned milk and
"Glucose" preparation but even that caused him to vomit. The local
medical unit was unable to care for him and therefore transferred him
to the Bilibid Hospital.

He gave a history of 18 years residence in the tropics and
North China. He was retired from the Navy on 20 years' service in 1941.
He returned to active duty a few months later qualified for shore duty
only because of his hypertension (160/90) and obesity (5' 7 3/4" 238 #).
He was otherwise in good health and had no history of syphilis.

His first recognized symptoms of Malaria appeared in the
latter half of March 1942 while he was on duty in Bataan, P.I. and nec-
essitated his admission to the Army Hospital #2, Cab Cabin, P.I. (4-7-42)
He remained under quinine treatment there until his fever subsided,
about 2 weeks. He was transferred to San Fernando and then to Bilibid
Prison, Manila, P.I. on 5-27-42 and took quinine in small amounts,
irregularly, when he was able to obtain it.

6-13-42 he volunteered for the working detail in the Port
and remained there until his admission to the hospital here. During
his time in the Port Area ~~and~~ he had occasional minor attacks of
fever and took quinine, 30 grains daily while the acute symptoms lasted
and then 10 grains daily for one to two weeks. His severest attack of
fever since ~~June~~ occurred in August when he was sick for two weeks, had
a fever and other symptoms of an acute attack of malaria which
cost him the most loss of strength and weight, but was finally con-
trolled by quinine therapy he administered. The quality and quantity
of his food was variable but during the entire time from January
when he went to Bataan on duty until the present he had lost about
15 lbs., weight, most of course since the onset of Malaria.

He showed marked pallor, moderate jaundice, emaciation,
atrophy, T-10L(F axillary), P-100, R-25, but was clear mentally
with remarkable strength for his condition. He was vomiting copious
amounts of green, watery material with some mucus. He urinated
frequently and urine as voided contained a bright red pigment which
turned to brown, coffee-color on standing. The spleen was 12 cm bel-
low costal margin, the liver was at about the same level, and both
slightly tender. There was slight pain over the costovertebral
angle to pressure. The extremities were cold and there was slight
tremor on the brow. The pulse was of fair quality. BP-118/60
The blood count on admission- Hb-20%, RBC-750,000, WBC-2,400,
B-3, Segs-48, Lymph-41, Monos-2, Basos-1. Recheck: Rbc-880,000
Hb-10-20%
